

# Recorded Future V3 - Content Pack Design Document

## Overview

The Recorded Future V3 pack delivers a single integration - **Recorded Future Alerts**.

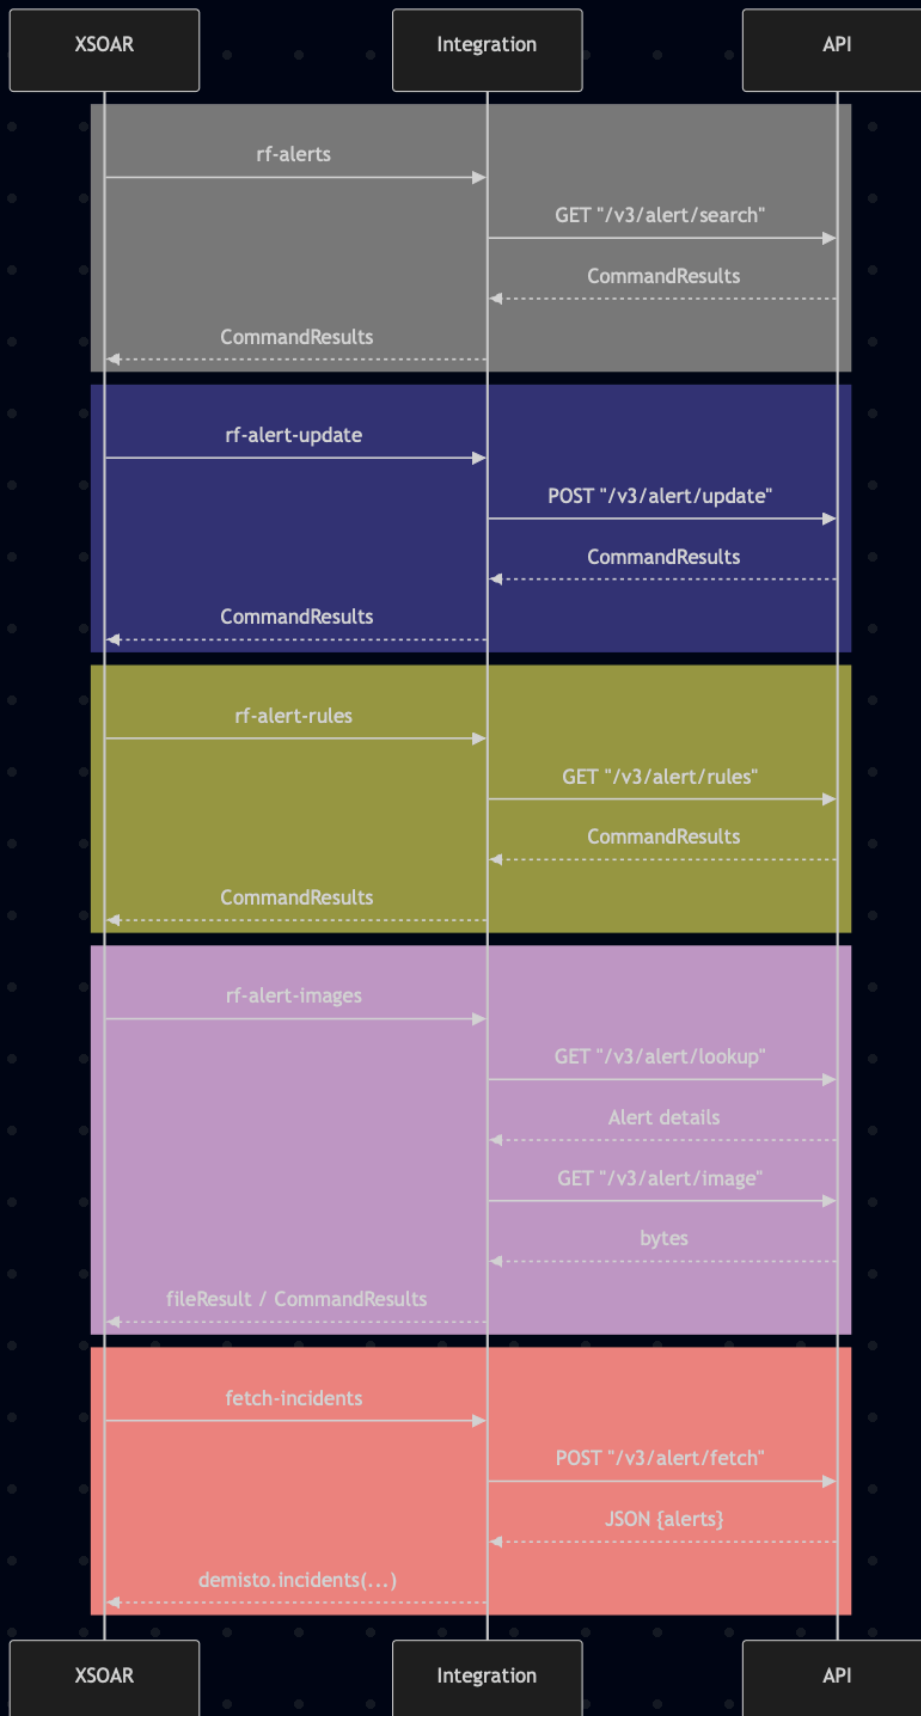

The new integration allows Cortex XSOAR users to search, fetch, triage and update both **Classic Alerts** and **Playbook Alerts** from Recorded Future.

The pack supersedes the alert-centric functionality that previously lived in **Recorded Future v2** and **Recorded Future - Playbook Alerts**.

## Supported Commands

Command	Description
Fetch incidents	Fetch incidents from Recorded Future into XSOAR
rf-alerts	Search alerts
rf-alert-update	Update alert status, comment, reopen strategy
rf-alert-rules	Search for Alert Rule IDs by name.
rf-alert-images	Fetch available alert images, and attach to the incident.

## High-level Architecture
